

TAIWO HENRY FADENI

SOFTWARE & AI ENGINEER | LLM SYSTEMS • RAG & AGENT WORKFLOWS • BACKEND

Lagos, Nigeria (Remote / Relocation) • +234 706 616 1980 • hfadeni@gmail.com • [Portfolio](#) • [GitHub](#) • [LinkedIn](#)

PROFESSIONAL SUMMARY

Software & AI Engineer with an Electrical & Electronics Engineering foundation, specializing in production LLM systems, evaluated RAG architectures, autonomous agent workflows (LangGraph), and high-throughput Python backends. Experienced in building deterministic guardrails, human-in-the-loop controls, automated evaluation suites (Spider golden set), and observable distributed backends (FastAPI, Redis, Celery, DuckDB). Proven track record of delivering end-to-end applications from system architecture to CI/CD deployment.

TECHNICAL SKILLS

Programming Languages: Python (3.12+), SQL (PostgreSQL, DuckDB, SQLite), JavaScript / TypeScript, MATLAB, HTML5/CSS3
AI & LLM Engineering: Generative AI, LLM APIs (OpenAI, Anthropic, Groq, Ollama), LangChain, LangGraph, RAG, Vector DBs (Pinecone, ChromaDB), Embeddings, Semantic Caching, Prompt Versioning, Guardrails & Policy Gates, Structured Outputs (Pydantic), HITL, Automated Evals
Backend & Distributed Systems: FastAPI, REST APIs, WebSockets, Server-Sent Events (SSE), Celery, Redis (Pub/Sub, Sliding-Window Rate Limiting, Caching), AsyncIO, DuckDB, PostgreSQL, SQLite, Alembic, Pandas, PySpark, ETL Pipelines
DevOps, Testing & Observability: Git, GitHub, Docker, Docker Compose, GitHub Actions (CI/CD), Pytest (80%+ CI gates), Prometheus, Grafana, Structured JSON Logging, Loki, Supabase, Vercel

SELECTED AI & BACKEND PROJECTS

Retrieval-Augmented Analytics Dashboard (Text-to-SQL) | *FastAPI • DuckDB • sqlglot • Redis • SSE* 2026

- Architected a natural-language to SQL analytics workspace executing sandboxed, read-only analytical queries against DuckDB with streamed SSE explanations and dynamic charts.
- Built a 2-stage AST validation pipeline using sqlglot (enforcing table/column verification, write-query rejection, and injection safeguards) with self-correction retry logic.
- Engineered an automated evaluation harness across an 80-pair Golden Set (adapted from Spider), achieving **96% SQL validity**, **74% execution accuracy**, **61% failure self-correction**, and **~4.2s p95 latency**.

Autonomous AI Code Review Agent | *Python • FastAPI • LangGraph • Celery • Redis • Docker* 2026

- Developed an event-driven GitHub App agent that parses pull-request diffs, retrieves relevant file context, and publishes line-level inline reviews and commit statuses.
- Implemented HMAC-SHA256 webhook verification, Redis sliding-window rate limiting, and asynchronous job queuing via Celery workers to decouple webhook intake from model inference.
- Built pluggable multi-provider LLM abstraction (OpenAI, Anthropic, Groq, Ollama), structured JSON validation, and an evaluation harness with an **80% CI code coverage** gate.

Self-Healing Microservices Monitor (Autonomous SRE Agent) | *LangGraph • ChromaDB • Prometheus • Postgres* 2026

- Built an incident-response agent integrating Prometheus Alertmanager webhooks, LangGraph multi-step diagnosis, and ChromaDB vector runbook retrieval.
- Engineered a 4-condition deterministic policy gate (confidence ≥ 0.75 , allowlisted low-risk actions, impact checks, human approval routing) preventing destructive runaway executions with PostgreSQL audit trails.
- Achieved **100% (4/4) action and policy correctness** across simulated failure scenarios with a live React operator dashboard.

Clear Skin Concierge (AI Commerce & Clinical Assistant) | *Next.js 14 • TypeScript • OpenAI • Pinecone • SQLite* 2026

- Engineered a full-stack skincare commerce platform with an AI concierge utilizing deterministic fast-path routing, semantic caching, and Pinecone vector retrieval with lexical fallback.
- Designed a typed action engine (7 site actions, 8 tool contracts, 2-turn bounded loop) requiring explicit user confirmation before cart mutations or bookings to prevent silent state mutations.

PROFESSIONAL EXPERIENCE & RESEARCH

Freelance Software & AI Engineer | *Independent Engineering & Consulting* Jan 2025 – Present (Remote)

- Designed and delivered production-grade AI systems, RAG workflows, agentic automation pipelines, and backend APIs for international clients and product builds.
- Implemented rigorous evaluation harnesses, safety guardrails, and deterministic tool-use boundaries across web, voice, and developer automation applications.

Electrical & Automation Engineering Intern | *Promasidor Nigeria Limited* May 2024 – Sep 2024 (Lagos, NG)

- Supported maintenance, diagnostic troubleshooting, and optimization of automated PLC-driven production-line systems in a high-volume FMCG manufacturing facility.
- Applied structured root-cause analysis (RCA) to resolve electrical and sensor faults, cutting recurring downtime; documented 5+ automation workflows and SOPs.

Student Research Assistant | *Communication Research Group & Control Systems Lab* 2020 – 2025 (OAU, NG)

- Co-developed an IoT-compatible telemetry station and simulated sensor-to-microcontroller data transmission using MATLAB and Simulink.
- Modeled Signal-to-Noise Ratio (SNR) across wireless configurations and contributed to smart metering prototypes for service-based tariff billing.

EDUCATION & PROFESSIONAL DEVELOPMENT

B.Eng., Electrical & Electronics Engineering | *Obafemi Awolowo University* 2019 – 2025 (Ile-Ife, Nigeria)

Specialized Training: Data Engineering Track (DataCamp, 2024–2025) • Software & Data Engineering (Data Epic, 2025) • Computational Thinking for Problem Solving (UPenn, 2022)
